Safety Information

For your own safety and the safety of others, and to prevent damage to the device and vehicles upon which it is used, it is important that the safety instructions presented throughout the product user manual be read and understood by all persons operating or coming into contact with the device.

There are various procedures, techniques, tools, and parts for servicing vehicles, as well as in the skill of the person doing the work. Because of the vast number of test applications and variations in the products that can be tested with this equipment, we cannot possibly anticipate or provide advice or safety messages to cover every circumstance. It is the automotive technician's responsibility to be knowledgeable of the system being tested. It is crucial to use proper service methods and test procedures. It is essential to perform tests in an appropriate and acceptable manner that does not endanger your safety, the safety of others in the work area, the device being used, or the vehicle being tested.

Before using the device, always refer to and follow the safety messages and applicable test procedures provided by the manufacturer of the vehicle or equipment being tested. Use the device only as described in this manual. Read, understand, and follow all safety messages and instructions in this manual.

Safety Messages

Safety messages are provided to help prevent personal injury and equipment damage. All safety messages are introduced by a signal word indicating the hazard level.

⚠️ DANGER
Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury to the operator or to bystanders.

⚠️ WARNING
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to the operator or to bystanders.

Safety Instructions

The safety messages herein cover situations Auro is aware of. Auro cannot know, evaluate or advise you as to all of the possible hazards. You must be certain that any condition or service procedure encountered does not jeopardize your personal safety.
DANGER

When an engine is operating, keep the service area WELL VENTILATED or attach a building exhaust removal system to the engine exhaust system. Engines produce carbon monoxide, an odorless, poisonous gas that causes slower reaction time and can lead to serious personal injury or loss of life.

SAFETY WARNINGS

- Always perform automotive testing in a safe environment.
- Wear safety eye protection that meets ANSI standards.
- Keep clothing, hair, hands, tools, test equipment, etc. away from all moving or hot engine parts.
- Operate the vehicle in a well ventilated work area, for exhaust gases are poisonous.
- Put the transmission in PARK (for automatic transmission) or NEUTRAL (for manual transmission) and make sure the parking brake is engaged.
- Put blocks in front of the drive wheels and never leave the vehicle unattended while testing.
- Be extra cautious when working around the ignition coil, distributor cap, ignition wires and spark plugs. These components create hazardous voltages when the engine is running.
- Keep a fire extinguisher suitable for gasoline, chemical, and electrical fires nearby.
- Do not connect or disconnect any test equipment while the ignition is on or the engine is running.
- Keep the test equipment dry, clean, free from oil, water or grease. Use a mild detergent on a clean cloth to clean the outside of the equipment as necessary.
- Do not drive the vehicle and operate the test equipment at the same time. Any distraction may cause an accident.
- Refer to the service manual for the vehicle being serviced and adhere to all diagnostic procedures and precautions. Failure to do so may result in personal injury or damage to the test equipment.
- To avoid damaging the test equipment or generating false data, make sure the vehicle battery is fully charged and the connection to the vehicle DLC is clean and secure.
- Do not place the test equipment on the distributor of the vehicle. Strong electromagnetic interference can damage the equipment.

KEY LEARNING VIA SMART MODE ..................................................................................... 2
KEY LEARNING VIA EXPERT MODE ..................................................................................... 12
Introduction

This manual introduces how to conduct 2008 Audi A4 key learning with Auro OtoSys IM600 Smart Mode and Expert Mode.

Two options are available when accessing the IMMO function:

- Smart Mode – the IM600 tablet will read the vehicle information and analyze the IMMO part information automatically.
- Expert Mode – user can make selections step by step to locate the IMMO part.

Procedures before getting started:

1. Connect the OtoFlash to the vehicle’s DLC via the main cable for both communication and power source.
2. Connect the OtoFlash to the tablet via BT pairing, or USB connection.
3. Connect the IM600 tablet to the included UP400 via USB cable.
4. Make sure the WiFi service is available
5. Turn the ignition on, or turn on the hazard lights.

NOTE
Illustrations used in this manual are samples, and the actual testing screens may vary by vehicle. Observe the menu titles and on-screen instructions to make correct selections and operations.
Key Learning via Smart Mode

1. Turn on the IM600 tablet, tap **OtoSys** on the main interface screen, then **IMMO**. A vehicle menu displays and a disclaimer prompts up. Tap **Accept** to continue.

![Figure 1 Sample Main Interface](image1)

![Figure 2 Sample OtoSys Interface](image2)
2. Connect the IM600 tablet to WiFi, then go back to the vehicle menu.

3. Tap Audi on the vehicle menu, then tap Smart Mode. The IM600 starts to read vehicle information automatically.

NOTE
You can click on the icon near the top-right corner to record the operation data. If you encounter any difficulties, click on the icon again to send us the data and the problem, so that our engineers could help.
4. Tap **Yes** on the vehicle information interface. Pay attention to the information interface, make sure all the working keys are prepared. Tap **OK** to check the present key status of the vehicle.

![Sample Information Screen](image)

**Figure 8 Sample Information Screen**

5. Check the present key status, if the vehicle has two working keys already, the number should be 2. Tap **ESC** to the Function Select interface.

![Sample Key Status Screen](image)

**Figure 9 Sample Key Status Screen**

6. Tap **Backup vehicle data** on the Function Select interface to backup data in case of problems.

**NOTE**

If “L0 x-y” displays on the dashboard during data backup, or the keys can’t start the engine after key learning, turn to Expert Mode, tap **Repair Vehicle’s Not Start**. If the engine can’t be started after the former operation, tap **Restore EEPROM data**,
repeat Key Learning procedures.

7. Name the file of backup data. Tap **Confirm**, data backup starts automatically. Tap **OK** on the “EEPROM data backup success” interface, go back to the Function Select interface.

NOTE
If the dashboard lights go out during data backup data reading and key learning, turn to the Expert Function Select interface, tap **Reset instrument**. Go back to the Smart Mode and proceed after lights work normally.
8. Tap **Key Learning** on the Function Select interface. Key learning starts automatically.
9. Making dealer key starts automatically after reading EEPROM data. Proceed as information displayed. Tap **OK** when operation over.

*Figure 14 Sample Function Select Screen*

*Figure 15 Sample Information Screen*
10. Select the number of keys that need to be learned after making dealer key. Tap OK to proceed.

⚠️ NOTE

The number should be the sum of existing working keys brought with you and the new keys you need. For example, you’ve got 2 working keys, 1 blank key has been made dealer key, but all 3 keys need to be learned, select 3 here.
11. Proceed as information displayed to conduct key learning. Tap **OK** when operation over.

Key learning completed!

Figure 22  Sample Information Screen
12. Tap **OK** on the “Key learning completed” interface. Proceed as information displayed to check whether the newly-learned keys can start the engine. Tap **OK** when operation over. Key learning via Smart Mode completes.

---

**Key Learning via Expert Mode**

1. Turn on the IM600 tablet, tap **OtoSys** on the main interface screen, then **IMMO**. A vehicle menu displays and a disclaimer prompts up. Tap **Accept** to continue.

---

5. Tap **Backup vehicle data** on the Key Learning Function Select interface to backup data in case of problems.
6. Name the file of backup data. Tap **Confirm**, data backup starts automatically. Tap **OK** on the “EEPROM data backup success” interface, go back to the Key Learning Function Select interface.

**NOTE**
If the dashboard lights go out during data backup data reading and key learning, tap **Reset instrument** on the Key Learning Function Select interface. Proceed after lights work normally and EEPROM data backup successes.

7. Tap **Read IMMO data** to get the Vehicle anti-theft information. Tap **OK**, go back to the Key Learning Function Select interface.
8. Tap Make dealer key. Proceed as information displayed. Tap OK on the “Make dealer key success” interface, go back to the Key Learning Function Select interface.

**NOTE**
Repeat procedures of “Make dealer key” if you want more than one dealer key.

Please turn ignition off. Insert each key that needs to be learned and turn ignition on for a continuous period of 2s.

Figure 44 Sample Information Screen
10. Tap OK on the “Key learning completed” interface. Proceed as information displayed on the information interface to check whether key learning is successful. Tap OK when operation over. Key learning via Expert Mode completes.

11. If the keys can’t start the engine after key learning, tap Repair Vehicle’s Not Start on the Key Learning Function Select interface. The repair starts automatically. Tap OK and try the check operation again.
12. If the keys still can’t start the engine even after the repair, tap **Restore EEPROM data** on the Key Learning Function Select interface.
Select the file stored in the “Backup EEPROM data” step to restore, tap **Confirm**. Tap **OK** on the “EEPROM data restoration success” interface, go back to the Key Learning Function Select interface. Tap **Key Learning**, conduct key learning procedures again.
